

Dräger Aerotest Simultan HP

The Dräger Aerotest Simultan HP is used to determine the quality of respiratory air supplied by a high-pressure system (compressor or compressed air cylinder).

Aerotest Simultan HP
complete in carrying case

The quality of the breathing air can be tested in accordance to the valid purification standards by means of quantitative measurements of the contaminations. Different regulations can be fulfilled (e.g. DIN EN 12021).

Quick-check (the measurement time in 5 minutes) with high accuracy.

The measuring device, G 5/8 or INT connection, can be connected to the high pressure compressed air supply systems.

All components of the Aerotest Simultan are arranged in a carrying case and ready for use.
